Variational wavefunctions for topologically-ordered Fermi liquids

w/ Shiwai Zhang, Flatiron Institute

Quantum spin liquids

Quantum spin liquids

$$\vec{S}_i \rightarrow f_{i\alpha}^\dagger \vec{\sigma}_{\alpha\beta} f_{i\beta}$$

Theoretical description: Spinons +
emergent gauge field

Quantum spin liquids

$$\vec{S}_i \rightarrow f_{i\alpha}^\dagger \vec{\sigma}_{\alpha\beta} f_{i\beta}$$

Theoretical description: Spinons +
emergent gauge field

$$\text{Variational WFs: } \prod (1 - n_{i\uparrow} n_{i\downarrow}) |\psi_0\rangle$$

Capturing topological order with correlated wavefunctions

Quantum spin liquids

$$\vec{S}_i \rightarrow f_{i\alpha}^\dagger \vec{\sigma}_{\alpha\beta} f_{i\beta}$$

Theoretical description: Spinons +
emergent gauge field

$$\text{Variational WFs: } \prod (1 - n_{i\uparrow} n_{i\downarrow}) |\psi_0\rangle$$

QSLs with charge fluctuations

Theoretical description: Spinons +
charges + emergent gauge field

Capturing topological order with correlated wavefunctions

Quantum spin liquids

$$\vec{S}_i \rightarrow f_{i\alpha}^\dagger \vec{\sigma}_{\alpha\beta} f_{i\beta}$$

Theoretical description: Spinons +
emergent gauge field

$$\text{Variational WFs: } \prod (1 - n_{i\uparrow} n_{i\downarrow}) |\psi_0\rangle$$

QSLs with charge fluctuations

Theoretical description: Spinons +
charges + emergent gauge field

Variational WFs: this talk

Where are these variational wavefunctions useful?

Doped Mott insulators - capturing low temperature physics with TO¹

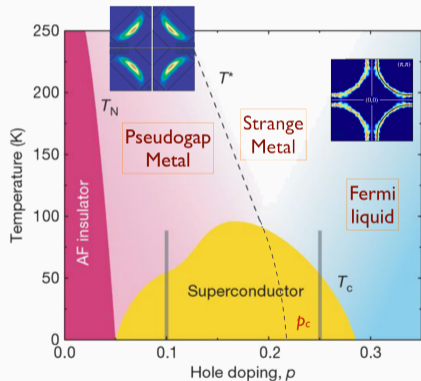

¹Lee, Nagaosa, and Wen, *Reviews of Modern Physics*, 2006

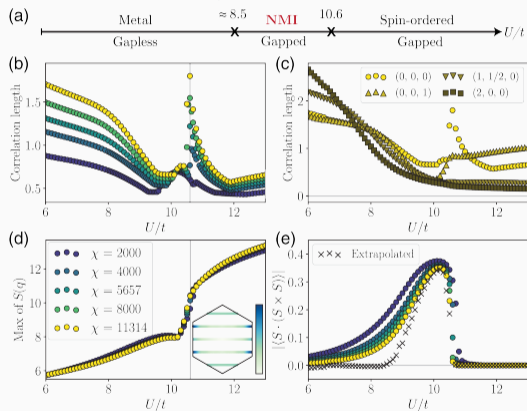

²Szasz et al., *Physical Review X*, 2020

Where are these variational wavefunctions useful?

Doped Mott insulators - capturing low temperature physics with TO¹

TO near metal/insulator transitions²

Polaronic correlations central for capturing doped Mott insulators

$$H = t \sum_{\langle ij \rangle} c_{i\sigma}^\dagger c_{j\sigma} + U \sum_i n_{i\uparrow} n_{i\downarrow}$$

Polaronic correlations central for capturing doped Mott insulators

$$H = t \sum_{\langle ij \rangle} c_{i\sigma}^\dagger c_{j\sigma} + U \sum_i n_{i\uparrow} n_{i\downarrow}$$

Do these wavefunctions support polaronic correlations?

Nearest neighbor magnetic correlations ($U/t = 7.4$)

Polaronic correlations probed by multipoint correlator $\langle h_i S_j^z S_k^z \rangle$

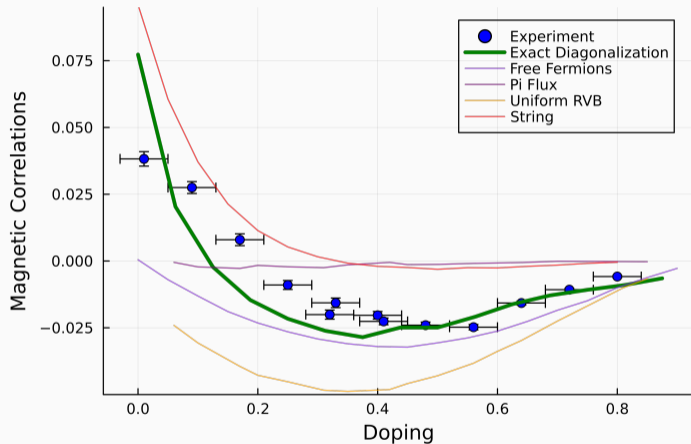

Nearest neighbor magnetic correlations ($U/t = 7.4$)

Polaronic correlations probed by multipoint correlator $\langle h_i S_j^z S_k^z \rangle$

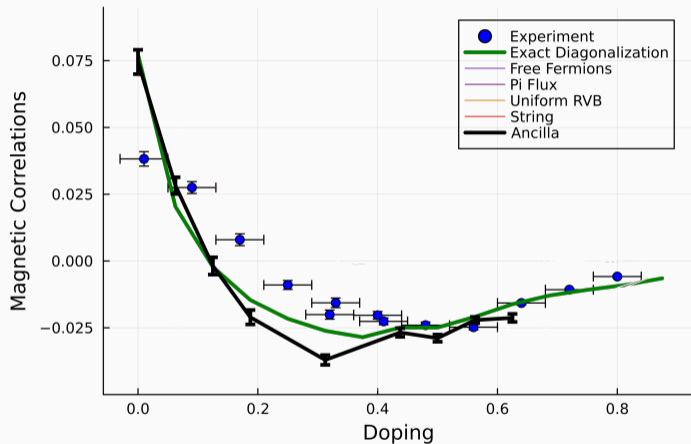

Nearest neighbor magnetic correlations ($U/t = 7.4$)

Polaronic correlations probed by multipoint correlator $\langle h_i S_j^z S_k^z \rangle$

Nearest neighbor magnetic correlations ($U/t = 7.4$)

Polaronic correlations probed by multipoint correlator $\langle h_i S_j^z S_k^z \rangle$

Next nearest neighbor magnetic correlations ($U/t = 7.4$)

Next nearest neighbor magnetic correlations ($U/t = 7.4$)

Next nearest neighbor magnetic correlations ($U/t = 7.4$)

Next nearest neighbor magnetic correlations ($U/t = 7.4$)

Conclusions and future directions

⁴Song, *Physical Review B*, 2021.

Conclusions and future directions

- Variational WFs of fractionalized Fermi liquids capable of capturing multi-point correlators of doped Hubbard models

⁴Song, *Physical Review B*, 2021.

Conclusions and future directions

- Variational WFs of fractionalized Fermi liquids capable of capturing multi-point correlators of doped Hubbard models
- Respectable energetics - low-energy states

⁴Song, *Physical Review B*, 2021.

Conclusions and future directions

- Variational WFs of fractionalized Fermi liquids capable of capturing multi-point correlators of doped Hubbard models
- Respectable energetics - low-energy states
- Can these WFs reconstruct higher-point correlators?

Conclusions and future directions
